Some of the candidates have requested to furnish the method of accuracy in determining to select the candidates. You are all aware that the skill test is conducted on computers. By following the below given formulae, typing speed and accuracy of candidates was assessed. To enable the candidates to know the manner in which the assessment was done the method/formulae is being placed in the website.

Non-Restricted: The candidate will be able to type incorrect words as well as edit/modify the text he/she has entered.

The results of the typing text are calculated based on the text the candidate has entered in the field. This mode has formulae to calculate the speed at which the candidate has typed; as well as measure the accuracy of the text or the number of errors the candidate has made. The definition and formulae are described below.

The following keys are imperative for the typing test:

1. Keystrokes Count: This is the count of the characters typed by the candidate in the text-area.

Note: This will not include the characters erased in the unrestricted mode.

The Backspace key count is not included in the Keystrokes count.

2. Backspace Count: This is the number of times the Backspace key was pressed.

Calculating the Speed and Accuracy in the Unrestricted Mode Typing Test

The following parameters and formulae are used to calculate the speed and accuracy of the typing test conducted in the Unrestricted mode:

1. Gross Words: This is the total number of words typed by the candidate; it includes both correct and incorrect words.

Gross Words is calculated as: Typed words.

2. Gross Words per min (GWPM): The total number of words typed in one minute.

GWPM is calculated as: $\text{Gross Words/Time taken in minutes}$

3. Net Words: The number of correct words typed.

Net Words is calculated as: Correct Words

4. Net words per min (NWPM) = $\text{Net Words/Time taken in minutes}$

5. Accuracy: The number of correct words entered.

Accuracy of content is calculated as: $\text{NWPM} \times 100 / \text{GWPM}$

The above parameters and formulae are computed as backend processes and cannot be altered.
